For 25 years, Elgin Separation Solutions has been providing quality, sophisticated solids control and waste management equipment to the oil and gas industry around the world. Our focus at Elgin is first and foremost creating and building the most durable, value-driven solids control equipment possible. With a growing awareness that whole mud dumping and dilution are unacceptable from both a cost and environmental standpoint, effective solids control equipment has become an increasingly important aspect in any drilling process. We are proud to say at Elgin, our equipment is built for the oilfield, by the oilfield.

With our unsurpassed and extensive experience, Elgin has installed more than 500 centrifuges worldwide. Our line of Barite Recovery and Dewatering Centrifuges embodies Elgin’s quest for perfection. All units are manufactured to oilfield standards and can be fitted with manual variable drives or variable frequency drive control panels. Our units also feature continuous duty motors, energy-efficient carbon fiber poly-chain drives, and stainless steel bowl construction. Capable of achieving up to 2500 G’s of force and 3200 rpm’s, these units are perfect for offshore or onshore operation. See our entire line of 14 inch, 16 inch and 19 inch diameter centrifuges. Elgin’s Hyper-G, Dual Motion, Variable Speeder Shaker provides power, performance and a new standard in practical design. It is fully capable of producing up to 7 G’s of force featuring a variable frequency drive with high, medium and low speed settings for precise solids control in any environment. Dual motion design allows the Hyper-G vibrator motors to be operated in either balanced elliptical or linear motion, right from the control panel, without having to change the swing weights. Spare parts and consumables have been designed to ensure the lowest replacement cost and long-term product durability and value. Please see our entire line of shale shakers designed for any rig configuration.

By focusing on each customer’s unique problems along with envisioning their goals, Elgin has become more than an original equipment manufacturer, we have become a sophisticated and trusted solutions provider. With locations and distributors worldwide and efficient lead times, we are proud to offer durable value, now. Our pride is truly expressed in our work through our craftsmanship, research, design and the overall practicality of our equipment. With 25 years of oilfield experience, we know the industry well and are confident that we can meet your unique needs and challenges.
